HOW TO CITE THE CHILDREN’S EMERGENCY DEPARTMENT SERVICES:

We encourage you to share these documents with others and we welcome their use as a reference. Please cite each document in the module in keeping with the citation on the table of contents of each of the three documents. If referencing the full module, please cite as:

Child Health BC. *Children’s Emergency Department Services*. Vancouver, BC: Child Health BC, April 2018.

Child Health BC acknowledges the principle authors, O’Donnell M, Williams, J and the contribution of the Emergency Department Working Group members: Barton S, Begg J, Bhangoo P, Brekke AJ, Burgoyne S, Cena C, Chestnut S, Fjellgaard D, Fryer M, Gerein L, Hay C, Hernandez C, Kazeil S, Lamb V, Matthews ML, Meckler G, Murray K, Mittersbach P, O’Donnell M, Ring T, Sabados W, Singhal A, Stackhouse S, Trapper E, Tuff Y, Van Osch M, Widas L, Wiebe M, Williams J.

Children's Emergency Department Services: Setting the Stage for Tiers Development

The Children's Emergency Department Tiers of Service module is made up three components:

1. Setting the Stage for Tiers Development (provides the context) **(this document)**
2. Tiers in Brief to Support System Planning (high-level description of the tiers, including responsibilities and requirements)
3. Tiers in Full to Support Operational Planning (detailed description of the responsibilities and requirements at each tier)

1.0 Providers of Children's ED Services

Children's ED services are provided by an interdisciplinary team which includes physicians/nurse practitioners, nurses, allied health and other health care team members.

In BC, physicians that work in EDs have one of three types of qualifications:

1. Royal College of Physicians and Surgeons of Canada (RCPSC)-certified.
 - a) Emergency Medicine specialists (FRCP(EM))
 - Physicians that have completed a 5 year post-graduate Emergency Medicine residency and RCPSC Emergency Medicine examination.
 - Pediatrics is a core component of all Emergency Medicine residency programs.
 - b) Pediatric Emergency Medicine specialists (FRCP(PEM))
 - FRCP-certified specialists in Pediatrics or Emergency Medicine that have completed an additional fellowship in Pediatric Emergency Medicine and the RCPS Pediatric Emergency Medicine examination.
2. Canadian College of Family Physician-certified (CCFP(EM))
 - Physicians that have completed a one-year post-graduate Emergency Medicine fellowship after a two-year Family Medicine residency. Must also have completed the CCFP(EM) examination.
3. Family physicians
 - Smaller rural and community hospitals may be staffed by family physicians who work in the ED on a part-time rotating basis.
 - Basic experience is a core component of family medicine training.

2.0 The Population

Nearly 800,000 children ages 0-16.9 years live in BC, making up 17% of the population. The highest number is in the FHA (329,166) and the highest percentage of children to total population is in the NHA (21%). See Table 1.

Table 1: Population, 0 – 16.9 Years & Total Population, by HA (PEOPLE 2016, bcstats.ca)

HA	Age					Total, all Ages	% 0 - 16.9 Yrs within HA	% 0 - 16.9 Yrs within BC
	<1	1-1.9	2-13.9	14-16.9	Total 0-16.9			
Interior	6,212	6,217	81,575	21,788	115,792	743,501	16%	15%
Fraser	18,659	19,211	231,898	59,398	329,166	1,770,531	19%	42%
Vancouver Coastal	10,537	9,551	113,576	31,572	165,236	1,167,877	14%	21%
Vancouver Island	6,429	6,438	82,315	21,135	116,317	775,489	15%	15%
Northern	3,241	3,402	41,784	10,015	58,442	282,726	21%	7%
Total	45,078	44,819	551,148	143,908	784,953	4,740,124	17%	100%
% Total 0-16.9 Yrs	6%	6%	70%	18%	100%			

3.0 Utilization of ED Services by BC Children

Two sources of provincial-level data were used to describe the utilization of ED services by children. Unfortunately both sources have limitations:

1. National Ambulatory Care Report System (NACRS): ED data collected via NACRS is available at 29 sites in BC (2015/16). These 29 sites represent 27% of the EDs in B.C. (many of the NACRS sites are the higher volume EDs) and 67% of the total ED visits. The NACRS provides patient and aggregate level data (including a breakdown of several variables by age).
2. Health Authority Management Information System (HAMIS): HAMIS data has been collected for several years but only provides aggregate-level data on total visits.

Highlights of the data are provided in the next section. Detailed data and a visual representation (map) are available in Appendices 1 - 3.

3.1 Pediatric ED Visits & Visit Rates

In 2015/16, there were approximately 2.35 million visits to EDs in B.C. hospitals (HAMIS data). Percentages from the 2015/16 NACRS data were applied to the 2015/16 BC ED visit data to help understand the utilization of EDs by children ages 0 – 16.9.

The HAMIS/NACRS data suggests:

- There are an estimated 367,000 pediatric visits (children ages 0 - 16.9 years) to BC EDs each year (~1,000 visits per day). This represents 16.7% of total ED visits. See Table 2 for HA level data and Appendix 3 for hospital-level data on total ED and pediatric ED visits.
- The pediatric ED visit rate averages 467 visits per 1,000 children per year in BC. It ranges from 347 per 1,000 in the Fraser Health Authority (FHA) to 751 in the Northern Health Authority (NHA). See Table 2, including notes 3 and 4.

Table 2: Total ED and Estimated Pediatric ED Visits (2015/16)

HA	Total ED Visits (Adults & Children)	Pediatric ED Visits (Est.)	% Pediatric ED Visits/Tot ED Visits	% Provincial Pediatric ED Visits	Population 0-16.9 years	Pediatric ED Visits (Est.)/1,000 Population Aged 0 – 16.9 years (HA)	Pediatric ED Visits (Est.)/1,000 Population Ages 0 – 16.9 years (HSDA)
IHA	494,417	74,061	15.0%	20.2%	115,792	639	EK: 935 KB: 826 OK: 477 TCS: 719
FHA	700,945	114,293	16.3%	31.2%	329,166	347 ^{Note 3}	FE: 452 FS: 336 FN: 305
VCH	429,610	32,478	7.56%	8.9%	165,236	485 ^{Note 3}	Coastal: 428
BCCH	48,612	47,673	98.1%	13.0%			Richmond: 215 ^{ote 3} Van: 620 ^{Note 3}
VIHA	395,973	54,444	13.8%	14.8%	116,317	468	NVI: 470 CVI: 625 SVI: 347
NHA	283,190	43,891	15.5%	12.0%	58,442	751	NE: 675 NI: 644 NW: 1,018
Total	2,352,747	366,841	16.7%	100.0%	784,953	467	467

Notes re Table 2:

1. Total ED visits (adults and children) were based on 2015/16 HAMIS data.
2. Estimated pediatric ED visits were based on 2015/16 NACRS data for sites where NACRS data was available. Where NACRS data was not available, the provincial average of 15.48% (excludes “outlier sites” as listed in Appendix 3) of total ED visits was utilized.
3. VCH and BCCH visit data was combined to determine the VCH pediatric visit rate. Given the provincial role of BCCH and the fact that a significant number of children from FHA also present to BCCH, the VCH visit rate is likely overstated and the FHA rate understated. At an HSDA level, the BCCH visits were assumed to be from Vancouver. This likely overstates the Vancouver visit rate and understates the rates from Richmond, Coastal and FHA Health Service Delivery Areas (especially Fraser North as it is closest to BCCH).
4. Estimated pediatric ED visits/1,000 population is significantly higher in areas outside the Lower Mainland and Victoria. This may reflect limitations in alternative options for obtaining medical care.
5. Population estimates were based on B.C. statistics from BC Stats for 2015.

Considering future population growth, these figures are expected to increase by 9% in the next 10 years. The predicted future rise in the number of ED visits may also be impacted by changes such as the availability of primary care services and the public's perception of the ability to obtain an assessment and diagnosis in the community within an appropriate time frame. These factors have historically increased the rate of ED visits faster than the rate of population growth.

3.2 Ages & Disposition of Children Utilizing ED Services

The highest proportion of pediatric ED visits was comprised of children ages 1 - 4 years of age (33% of the total child visits). See Table 3.

Of the pediatric visits, 91% were discharged home and 4% were admitted to hospital. A few were transferred to other hospitals for admission and/or left without being seen/treated.

Table 3: Ages of Pediatric ED Visits (NACRS data, 2015/16)

Age	% Provincial Pediatric Visits	Disposition after ED Visit						Total
		% Discharged Home	% Left Before End of Visit	% Admitted to Site of Receiving ED	% Transferred to Another Site	% Death On/After Arrival	% Intra Facility TF to Day Surg/Clinic	
<1	11%	88%	3%	7.9%	0.5%	0.0%	0.6%	100%
1 - 4	33%	92%	4%	3.3%	0.2%	0.0%	0.4%	100%
5 - 9	24%	93%	4%	3.4%	0.2%	0.0%	0.3%	100%
10 - 14	21%	92%	3%	4.4%	0.2%	0.0%	0.2%	100%
15 - 16	11%	90%	3%	6.6%	0.4%	0.0%	0.1%	100%
Total	100%	91%	4%	4.4%	0.2%	0.0%	0.3%	100%

Notes re Table 3:

1. Data is based on 2015/16 NACRS data for the sites that are collecting NACRS data.
2. Royal Inland data was excluded from the NACRS data due to data quality issues.

3.3 Acuity & Reasons for Children Utilizing ED Services

The acuity levels of children presenting to EDs (NACRS data) are lower than those of adults. Patients triaged at Canadian Triage Acuity Scale (CTAS) levels 4 or 5 comprised 41% of total pediatric ED visits compared to 34% of total adult visits.

Assuming the NACRS percentages are representative of all B.C. EDs, it is estimated that 46,500 children/year present to B.C. EDs with high acuity conditions (CTAS 1 or 2), 166,000 with moderate acuity conditions (CTAS 3) and 152,000 with low acuity conditions (CTAS 4 and 5). See Table 4.

Table 4: CTAS Mix of Pediatric and Adult Visits (NACRS data, 2015/16)

CTAS	Description	Children (0-17)	Adults (18+)	Estimated Pediatric Visits/Year
1	Resuscitation	0.4%	1%	1,500
2	Emergent	12%	16%	45,000
3	Urgent	45%	48%	166,000
4	Less Urgent	39%	30%	144,000
5	Non-Urgent	2%	4%	8,000
6	Unknown	<1%	1%	2,000
Total		100%	100%	366,500

Note re Table 4: Data is based on 2015/16 NACRS data for the sites that are collecting NACRS data.

The NACRS data suggests:

- The reasons for pediatric ED visits are diverse; although the ten most frequent presenting complaints¹ make up 55% of total cases.
- Fever is the most frequent presenting complaint overall and for children ages 0 – 9 years, while upper extremity injuries are the most common for ages 10 and over.
- See Table 5.

Table 5: Most Frequent Presenting Complaints to ED, by Age Groups (NACRS data, 2015/16)

Rank	Top 10 Presenting Complaints								
	<1 Years Old			1-4 Years Old			5-9 Years Old		
	Presenting Complaint	Visits	%	Presenting Complaint	Visits	%	Presenting Complaint	Visits	%
1	Fever	5,180	19%	Fever	15,903	20%	Fever	7,187	12%
2	Cough/congestion	3,536	13%	Cough/congestion	8,452	10%	Abdominal pain	5,352	9%
3	Nausea and/or vomiting	2,433	9%	Nausea and/or vomiting	5,959	7%	Upper extremity injury	4,651	8%
4	Shortness of breath	2,006	7%	Laceration / Puncture	4,867	6%	Laceration / Puncture	3,589	6%
5	Head injury	1,503	5%	Shortness of breath	4,293	5%	Cough/congestion	3,539	6%
6	Rash	1,460	5%	Head injury	3,810	5%	Nausea and/or vomiting	3,204	5%
7	Inconsolable crying	873	3%	Rash	3,537	4%	Earache	2,689	4%
8	Diarrhea	745	3%	Upper extremity injury	3,203	4%	Head injury	2,263	4%
9	Minor complaints NOS	726	3%	Abdominal pain	2,365	3%	Lower extremity injury	2,127	4%
10	Constipation	478	2%	Earache	2,094	3%	Rash	1,930	3%
Total, top 10		18,940			54,483			36,531	
% NACRS visits, top 10			69%			67%			61%

¹ “Presenting complaint” refers to the symptom, complaint, problem or reason for seeking emergency medical care as identified by the patient. The Canadian Emergency Department Information System (CEDIS) Working Group developed the Presenting Complaint List (PCL). This information is captured in the NACRS data.

Rank	Top 10 Presenting Complaints					
	10 -14 Years Old			15 – 16 Years Old		
	Presenting Complaint	Visits	%	Presenting Complaint	Visits	%
1	Upper extremity injury	7,407	15%	Upper extremity injury	2,474	9%
2	Lower extremity injury	4,844	9%	Lower extremity injury	2,412	9%
3	Abdominal pain	4,145	8%	Abdominal pain	2,170	8%
4	Lower extremity pain	2199	4%	Depression/Suicidal/deliberate self harm	1403	5%
5	Head injury	2,196	4%	Head injury	1,141	4%
6	Laceration / Puncture	2,159	4%	Lower extremity pain	1091	4%
7	Upper extremity pain	2151	4%	Laceration / Puncture	1,075	4%
8	Fever	1,771	3%	Upper extremity pain	736	3%
9	Cough/congestion	1,275	3%	Headache	604	2%
10	Shortness of breath	1,099	2%	Sore throat	586	2%
Total, top 10		29,246			13,106	
% Visits, top 10			57%			51%

Note re Table 5:

N &/or V = nausea and /or vomiting; SOB = shortness of breath

Of the patients *admitted* as inpatients, the ten most common presenting complaints were:

- | | |
|---|----------------------------|
| 1. Shortness of breath | 6. Cough/congestion |
| 2. Fever | 7. Seizure |
| 3. Abdominal pain | 8. Upper extremity injury |
| 4. Depression/suicidal/deliberate self-harm | 9. Overdose ingestion |
| 5. Nausea and/or vomiting | 10. Lower extremity injury |

Note: These ten complaints accounted for 62% of pediatric admissions from ED.

3.4 ED Service Locations

In 2015/16, ED care was provided in 108 hospitals in B.C. (Health Authorities Management Information System (HAMIS) reporting tool).

- An estimated 1,000 physicians and a small number of nurse practitioners provided care, in collaboration with multidisciplinary teams.
- An estimated two-thirds of physicians providing care in EDs in B.C. did so on a part-time basis, in addition to their primary jobs as family physicians.
- Most physicians working in EDs in B.C. graduated from family medicine residency programs and most have no formal emergency medicine training or certification. While statistics are not available in B.C., an Ontario survey reported that 70% of physicians working in EDs in southwestern Ontario had no formal emergency training or certification (Bhimani et al, 2007).

Because children may present to any ED at any time, all EDs in B.C. must be able to provide a high standard of emergent care to children. This includes ensuring appropriate levels of pediatric training for physicians, nurses and other health care providers and the availability of age-appropriate equipment and space that supports child and family-centered care. Processes and protocols must also be in place to support the timely transfer of children to other tiers of service when required.

While ED care is provided in 108 hospitals, relatively few have the capacity to admit children for inpatient care:

- 21/108 hospitals have designated pediatric beds: 173 beds at B.C. Children’s Hospital (BCCH) and 194 in other B.C. hospitals, for a total of 367.
- 32/108 (30%) hospitals do not have any capacity to admit inpatients (adults or children) to their facility.
- Of the remaining 54 hospitals, several do not have designated pediatric beds but do admit children.
- See Appendix 4 for a list of hospitals with designated inpatient pediatric beds.

Appendix 1: ED and Med/Surg Visits and Days by Facility

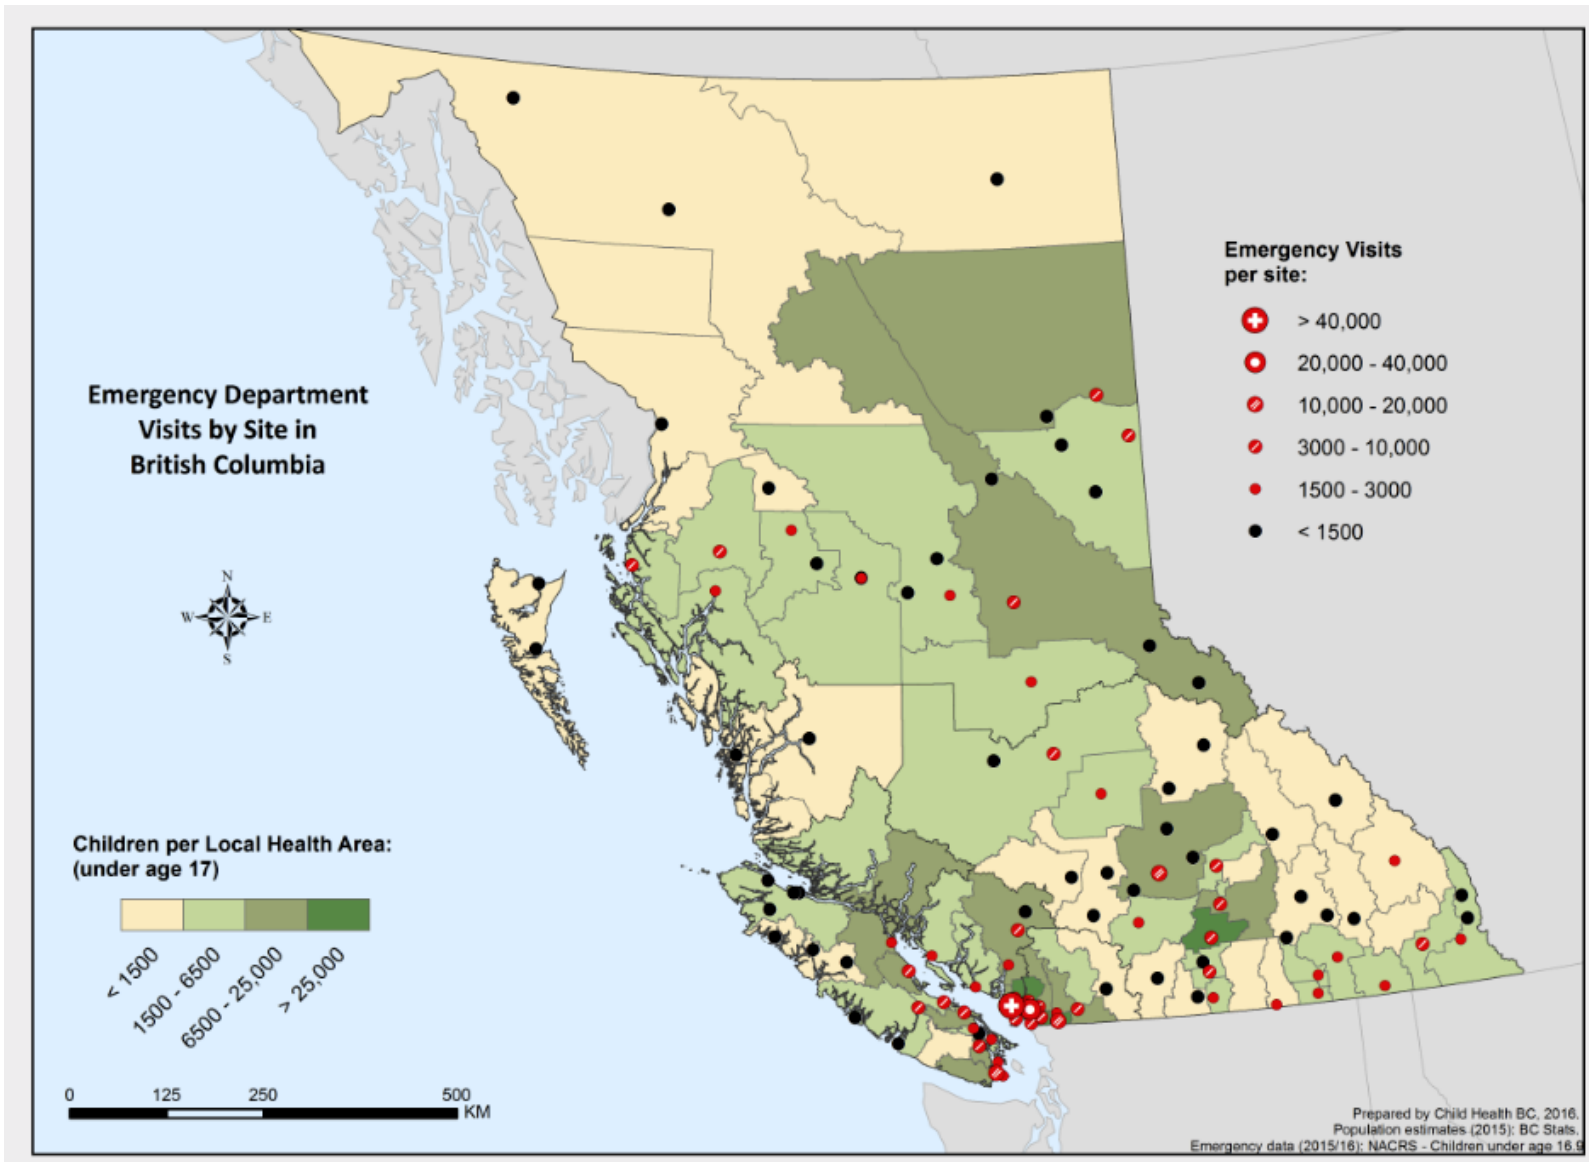

- Includes children ages 0 - 16.9 years.
- Surgical procedures: Procedures performed on children by a surgeon regardless of most responsible physician (MRP). Includes children in NICUs, PICUs, med/surg units and in day care settings.
- Med/surg visits and days: Visits and days sorted by MRP. Includes children in PICUs, med/surg units and in day care settings (excludes children in NICUs).
- Day care visits = Surgical or medical day care visits in which an anesthetic was provided.
- Medical and surgical data is for fiscal year 2015/2016. Source is the BC MoH Discharge Abstract Database.
- Emergency Department (ED) visits: Based on 2015/16 National Ambulatory Care Reporting System (NACRS) data for children ages 0-16.9 for sites that submit to NACRS. Where NACRS data was not available, visits were calculated as 15.48% x total ED visits. 2015/16 MIS data was used for total ED visits.

Appendix 2: Map of Pediatric ED Visits in BC

Appendix 3: Total ED & Estimated Pediatric ED Visits by Hospital

- Total ED visits (pediatrics and adult) were based on 2015/16 HAMIS data.
- Sites that submitted NACRS data in 2015/16 are highlighted in yellow.
- Sites that do not have inpatient beds are highlighted in brown.
- Pediatric ED visits were based on 2015/16 National Ambulatory Care Report System (NACRS) data for children ages 0 to 16.9 years² in sites where NACRS data was available. NACRS data was available for 29/109 EDs in B.C., representing 27% of sites and 67% of the total ED visits.
- Where NACRS data was not available, 15.48% of total ED visits was utilized to estimate the number of pediatric visits. This figure represented the average % of pediatric to total ED visits in the NACRS sites ("outlier sites" were excluded from the average - Van General, St Paul's, Mt St Joseph, UBC Health Sciences, Royal Jubilee & BCCH).

Source: Survey of health planners & ED working group in each HA, 2012/13. Updated with new information, as available.

Note: Several hospitals in BC do not have designated pediatric beds but admit children to beds on an adult inpatient unit(s). These hospitals are not included on the list above.

³ Beds have the capacity for invasive monitoring, inotropic drugs and mechanical ventilation.

⁴ Excludes beds in home-based settings.

⁵ Includes beds for ages 17 - 24.

⁶ Plan to increase to 48 beds in the future.

⁷ Contracted beds and number of beds fluctuates.

⁸ 14 beds: 5 child, 6 youth & 3 special care (assessment/stabilization) beds.

⁹ 4 beds have the capacity for more intensive monitoring, up to and including continuous cardiorespiratory monitoring.

¹⁰ 2 beds for planned admissions and 4 for crisis stabilization.

¹¹ Includes 1 detox bed.

¹² Includes 14 beds at Looking Glass (up to age 24), a residential eating disorders program operated by PHSA (BC Mental Health & Substance Use Services and BCCH) in collaboration with the Looking Glass Foundation.
